SUMMARY

Software engineer with 3 years designing, building, and operating production Go services and Kubernetes infrastructure. Lead a 7-engineer team and architect Obmondo's core platform — customer-facing APIs, cluster agents, and alerting systems for European enterprise infrastructure. Forward-deployed by habit: turn ambiguous customer and operations problems into shipped, reliable software.

WORK EXPERIENCE

OBMONDO (managed Kubernetes & Linux infrastructure)

Copenhagen, Denmark

Software Engineer 2 (SRE)

Aug 2025 – Present

- Lead a team of 7 engineers building Obmondo's core platform software; own architecture, design reviews, and delivery across the Go services behind the managed-infrastructure product.
- Architect and lead maintainer of **Obmondo API** — Go (Gin) + gRPC backend with 180+ REST endpoints across 20+ business domains (~225K LOC), PostgreSQL (sqlc), Redis Cluster caching, a Postgres-backed async job queue, and 40+ scheduled jobs; #1 contributor with 1,100+ commits.
- Designed the service-window subsystem that automates fleet maintenance end to end — auto-booking, reminders, auto-close, and reboot orchestration across customer server fleets.
- Built the metered-billing pipeline: hourly work-date time-registration slicing, invoice-period reconciliation, and month-to-date billing projection, integrated with Gitea and finance systems.
- Architected **kubeaid-agent**, the in-cluster agent for customer Kubernetes clusters — Prometheus-based node accounting, K8s EOL/EOS tracking, service-window-aware Argo CD sync, and PuppetDB facts sync.
- Hardened multi-tenant access control: role-based permissions (admin/TAM/team-lead), JWT + TOTP authentication, and read-only cross-customer middleware.

Software Engineer (SRE)

Jul 2023 – Jul 2025

- Built **go-opsmondo**, Obmondo's alert-handling daemon bridging Prometheus Alertmanager to Gitea issues and Mattermost — real-time notifications, periodic digests, and alert metrics for on-call teams.
- Shipped the CVE pipeline end to end: vuls scanner integration (Obmondo/vuls-exporter) → cve-report API → cached fleet-wide vulnerability reporting.
- Delivered customer-facing platform features across notifications, server lifecycle, Puppet facts sync, invoicing, contacts/tagging, and Grafana integration.
- Maintainer of **KubeAid** (open-source, Argo CD-based Kubernetes platform); on-call rotations with production incident response and RCAs.

OPEN-SOURCE EXPERIENCE

CNCF — CHAOS MESH Google Summer of Code 2022

May 2022 – Nov 2022

- Built **PhysicalMachineChaos** as a single static Go binary embedding kube-apiserver and kube-controller-manager with Chaos Mesh controllers — chaos experiments on bare metal without a full Kubernetes cluster; designed its logging and storage.
- Merged upstream: NetworkChaos device-field mutation webhook. Selected as an advanced GSoC project; mentored by PingCAP maintainers.

MERICO Junior Developer Evangelist — Apache DevLake (Incubating)

Jul 2022 – Oct 2022

- Early contributor and evangelist for Apache DevLake (Go + Grafana dev-analytics platform): documentation, tutorials, contributor onboarding, and community outreach.

Merged upstream PRs: kubedl-io/kubedl (Helm-chart CI validation; git-sync and host-network promoted from annotations to spec fields), knative-extensions/eventing-kafka-broker (broker-config status stashing; KafkaSource CRD), bitnami/charts (RabbitMQ cluster-operator metrics endpoint), kubescape/k8s-interface (roles and service-account retrieval).

SKILLS

Languages: Go, SQL / PL/pgSQL, Python, Bash, C, C++

Backend: Gin, gRPC, Protocol Buffers, REST API design, sqlc, GORM, gue (async job queues), JWT/TOTP auth, OpenAPI/Swagger, TDD

Data & Caching: PostgreSQL (partitioning, migrations, query optimization), Redis Cluster

Infrastructure: Kubernetes, Docker, Argo CD, KubeAid, Helm, Prometheus, Alertmanager, Grafana, PromQL, Puppet/PuppetDB, Terraform

DevOps & Practices: GitOps, CI/CD (Gitea Actions, GitHub Actions), Harbor, on-call & incident response, chaos engineering (Chaos Mesh), code review, team leadership

EDUCATION

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

Chennai, India

B.Tech, Computer Science and Engineering — CGPA: 9.60/10

Aug 2020 – May 2024
